V-Tech Panels

Healthcare

LiP Medical strongly believe the interior design of a modern healthcare facility is one of the most important factors to be considered when planning a project. The clinical environment has been proven to directly affect patient recovery and well being in conjunction with improving staff productivity.

We specialise in providing a full range of integrated furniture solutions and bedhead supply units for patient areas that would benefit from an enhanced healing environment

From turnkey projects or integrated furniture systems to standard medical supply units our experience and range of products guarantee that we can work to any design.

In conjunction with architects, specifiers and project teams, we are fully committed to improving the inpatient environment not only for patients but for families and healthcare staff. Our specialist knowledge of essential services for these key areas ensure full compliance with all standards whilst enhancing the interior design ensuring a less clinical environment during the hospital stay.

With hospitals often looking bare and sterile, patients can often feel anxious and distressed regarding their circumstances.

V-Tech Panels is the product that can help with this problem, from creating night skies for patient wards and treatment rooms to entertaining images for children's areas and waiting rooms. V-Tech Panels can add a sense of personality to places often regarded as soulless.

Healthcare Design.

Ceilings

Reduce anxiety and enhance spaces with the V-Tech Panel experience, creating calming environments in challenging scenarios. Rooms are transformed into far more user friendly and engaging settings.

V-Tech Panels

Media Wall

Add depth and warmth to your room by incorporating the systems LED edge light technology to create a greater sense of space. With sharp, high quality colour, it will transform any area. Accent and dimension that you have never seen before.

Our frames are available in matt black, white and bronze. The stylishly framed images will enable you to add 'a touch of you', making family pieces into masterpieces. The pictures are truly complemented by our elegant and contemporary frame options, creating images in your home that will redefine a room.

Subterranean spaces can be enhanced by using our window frame systems. 'Bring the outside in' and create scenic views in these inherently dark areas. The frames naturally illuminate the room, inspiring a sense of space and tranquillity.

Commercial offices often contain areas of dead space, such as wall breaks to reduce noise. Additionally poor lighting and restricted external views can reduce the efficiency amongst staff. V-Tech systems can eradicate this, creating vibrant, energy efficient, well-lit offices, promoting a feel good factor amongst patients and employees.

Wall Art

Wall Art

V-Tech lighting can be a catalyst in igniting our children's imagination, opening their minds to incredible learning experiences which were previously unimaginable. From ceiling lighting arrays displaying the universe to wipeable, illuminated screens which the children can write on, they can act as tools to maintain engagement in class and maximize the educational process.
