Case Study

Royal Buckinghamshire Hospital

Overview

With the acquisition of the Royal Buckinghamshire Hospital by Affinity Group, the Grade II listed building is currently undergoing major refurbishment and modernisation to create a flagship centre for spinal injuries and rehabilitation.

As part of the ongoing development, the first phase of the development was the refurbishment of the bedrooms in the International Spinal Injuries and Rehabilitation Centre with the vision to create a much warmer less clinical feel for the patient.

Due to the nature of the injuries and the length of stay of the patients, the design team wanted to avoid using standard horizontal or vertical bedhead systems and wanted a more aesthetic solution to complement the interior design of the rooms.

The Solution

The Comfort Unit

The Comfort Unit supplied by LiP Medical was the ideal solution and was selected for the refurbishment offering a functional medical supply unit with a less clinical feel. Regardless of trying to achieve a less clinical feel, the units must always meet the relevant safety standards.

The Comfort Unit

The Specifics

The comfort unit is part of a larger range of 'boutique hotel' style bedhead solutions that LiP Medical can provide.

The main panels are constructed from HPL high pressure laminate which is available in a range of finishes to compliment any interior design.

This inherent flexibility allowed each bedhead within the development to be tailored to the individual design of the rooms with the final selection of a plain coloured panel to the top and bottom of the unit with an inset wooden feature panel.

Essential Services

Naturally, the main objective of any bedhead unit is to provide essential services to the patient.

The bedhead solutions provided by LiP Medical fully comply with all international safety standards to ensure that all regulations are adhered to. Once installed, the comfort unit seamlessly integrates a fully compliant medical supply unit. For each individual room, the medical supply unit was configured to accommodate the electrical sockets, data outlets, nurse call and medical gases as required.

As part of the bedhead supply units, additional accessories can be fitted to further enhance the functionality.

The Accessories

A 'Wave' style bedhead light was supplied with each bedhead unit to provide general lighting for the room and reading lighting for the patient.

In addition to this, a bed buffer colour matched to the individual panels was also provided and fitted to the unit to prevent any risk of damage from the beds.

Healthcare Design.

The Details

LiP Medicals broad portfolio of enhanced bedhead units allow us to offer a number of different solutions.

Working in conjunction with designers is key to our design philosophy to achieve a warmer, less clinical environment for the patient.

Complimented by the large range of accessories that can be included with the bedhead units, this provides a comprehensive solution that can be adapted to suit each individual project.
