## Case Study

# Spire Parkway, Solihull

## Overview

Spire Parkway Hospital in Solihull just a few miles from Birmingham and part of the Spire Healthcare portfolio of Healthcare facilities is renowned for delivering high quality care for its patients as part of the redevelopment of the site and subsequent refurbishment of 40 bedrooms, LiP Medical were invited by the design team to provide new enhanced Bedhead Supply Units, Over Bed Lights, furniture and Integrated Plumbing Systems (IPS) units.

With limited space the decision was taken to supply an enhanced vertical bedhead supply unit with feature panel to allow the patient bed to sit between and allowing more space to manoeuvre around the room.

The Fascia of the panels are High Pressure Laminate in Nocturne Wood with a matching fascia on the over bed light. The wardrobes also have a same finish giving a coordinated high quality feel to the room design.

The Solution

## The Firenze

The Firenze Vertical supply Unit by LiP Medical was the ideal solution and was selected for the refurbishment offering a functional medical supply unit with a less clinical feel. Regardless of trying to achieve a less clinical feel, the units must always meet the relevant safety standards.

Healthcare Design.

# The Firenze

## The Specifics

**The Firenze bedhead supply unit is part of a larger range of enhanced bedhead solutions and bespoke furniture designed by LiP Medical .**

**The feature panels are constructed from HPL high pressure laminate which is available in a range of finishes to compliment any interior design.**

**The electrical sockets, data, nurse call system and switches are installed in a proprietary aluminium extrusion down the sides of the units, this gives the bedrooms a less clinical feel, more in keeping with a home or hotel.**

### Essential Services

Naturally, the main objective of any bedhead unit is to provide essential services to the patient. The bedhead solutions provided by LiP Medical fully comply with all international safety standards to ensure that all regulations are adhered to.

Once installed, the unit seamlessly integrates a fully compliant medical supply unit into an Enhanced feature wall panel. For each individual room, the medical supply unit was configured to accommodate the electrical sockets, data outlets, nurse call and medical gases as required.

### The Accessories

As part of the bedhead supply units, additional accessories can be fitted to further enhance the functionality.

An LED overbed light with up and down light modules was supplied at each bed to provide general lighting for the room and reading lighting for the patient. The reading light is controlled by the patient handset on the nurse call system.

The fascia on each light fitting is finished HPL matching the bed head supply units and so integrating into the interior design seamlessly. The LED Technology in the light units is digitally controlled using a "DALI" system.

### Healthcare Design.

### Design Integration

**LiP Medicals broad portfolio of enhanced bedhead Supply units and furniture allow us to offer a number of different and bespoke solutions. Providing the furniture has a package in bedroom areas affords full coordination in the design, ensuring the ergonomics are correct and costly post contract alterations are avoided.**
